ARYAN MEENA

Data Analyst | SQL | Python | Power BI | Excel

(617) 861-1307 | araj7042@gmail.com | LinkedIn | GitHub | Live Dashboard

SKILLS

SQL, Python, Microsoft Excel, Power BI, DAX, Tableau, PostgreSQL, data cleaning, data wrangling, data validation, data visualization, dashboards, KPI reporting, statistical analysis, hypothesis testing, A/B testing, regression, forecasting, cohort analysis, RFM segmentation, pandas, ETL, AWS, Git

EXPERIENCE

Boston University | ***Data Analyst (Research Assistantship)*** Sep 2025 – May 2026

- Reconciled 15 years of daily prices from 3 sources (exchange, vendor, Federal Reserve) into one audited dataset, exploring in Excel first and using Python for the advanced statistical analysis.
- Traced a 15-year trading signal to biased opening prices in a free data feed (Sharpe -1.36 on vendor data vs +0.25 on exchange data), protecting the research from a false result; paper **published in Risks (MDPI)**.
- Monitored 37 financial price feeds with automated data-quality checks, flagging 10 faulty series early.
- Caught 11 validation failures in real backtests, including look-ahead universe selection, mis-annualized Sharpe ratios and a reversed significance test, each with a dedicated automated check.
- Wrote SQL and Python for reporting, publishing a live 12-table SQL dashboard any reader can check.

Boston University | ***Graduate Teaching Assistant*** Jan 2026 – May 2026

- Explained statistics and model results in plain language to 60+ graduate students in weekly office hours for Advanced Machine Learning and Data Science with Python, turning debugging problems into clear next steps.
- Graded classification, regression and clustering projects with written feedback on methods and results.

PROJECTS

RetailPulse: E-Commerce KPI Reporting | PostgreSQL, SQL, Power BI, DAX Power BI Report

- Modeled 9 linked tables (~100K orders) into a PostgreSQL star schema through raw, clean and mart layers, keeping 98,199 valid orders and R$15.74M in sales after cleaning and validation.
- Segmented 98,199 orders with SQL cohort and RFM analysis; 2 segments held 40% of customers and 74% of revenue.
- Quantified a 1.7-star review penalty for late deliveries (4.29 vs 2.57) and published a 4-page Power BI report with DAX measures for month-over-month growth, retention and order value.

Service Operations Analytics | Python, SQL, AWS, Athena Live Dashboard

- Automated a daily AWS pipeline over 130K+ records that publishes only after **17 data checks** pass, at about $0.03 per run, with alarms for broken or stale data so reports stay trustworthy.
- Investigated two alarming team metrics and proved both were data artifacts, preventing a wrong conclusion about a group with 212 of 215 tickets open and keeping the team's reporting accurate.

Hospital Readmission Outreach Dashboard | Python, LightGBM, Tableau Tableau Dashboard

- Ranked patients by risk so the top 5% captured 1,696 readmissions vs 566 at random (**3.0x lift**).
- Published a Tableau Public dashboard with an outreach-capacity slider so care teams can size daily call lists.

EDUCATION

MS, Applied Data Analytics, Boston University (GPA 3.75/4.0) May 2026

- Led a six-person team at the BU MedAI Hackathon to a **podium finish** among 40+ teams; 5 first-author papers.
- Coursework: Data Mining, Data Analytics and Visualization, Foundations of Machine Learning, Big Data Analytics.

BTech, Electronics and Communication Engineering, Indian Institute of Space Science and Technology May 2023

- Coursework: Statistics and Probability, Computer Vision, Machine Learning for Signal Processing.
